

Table S1.—List of all Didelphid and Sigmodontine captures used in analyses reported in this paper. See text for descriptions and dates of sampling sessions 2-7. Release codes: 1-Normal release, 2-Torpid when released, 3-Collected (not released), 4-Escaped after specific identification was made, but before all data were collected. TK is Texas Tech University field number system, searchable at <http://diamante2.ttu.edu/fmi/webd/Mammals>. PIT tag is the unique number of the implanted Passive Integrated Transponder used in the mark-recapture sampling.
